PROFESSIONAL SUMMARY

Full-stack developer who combines a B.Sc. in Electrical and Computer Engineering with intensive web development training. Builds React and Node.js applications backed by MySQL and PostgreSQL, including AI products that use retrieval-augmented generation (RAG). Brings engineering rigor to debugging, data flow and performance, and ships clean, responsive interfaces.

TECHNICAL SKILLS

Frontend	JavaScript (ES6+), React, Vite, Tailwind CSS, responsive and accessible UI
Backend	Node.js, Python, REST APIs, authentication
Databases	MySQL, PostgreSQL, relational schema design
AI	LLM API integration, retrieval-augmented generation (RAG), semantic search
Tools	Git, GitHub, npm

PROJECTS

Evangadi AI Forum

React, Node.js, MySQL, RAG, LLM API, Tailwind CSS

- Built a full-stack community Q&A forum with secure authentication and protected routes.
- Implemented a RAG pipeline that retrieves relevant forum threads and generates answers grounded in the community's own content.
- Added semantic search to surface related questions beyond keyword matches, plus AI-assisted moderation.
- Designed a relational schema for users, questions and answers.

ChatGPT Clone

React, Node.js, Python, LLM API, Tailwind CSS

- Built a real-time chat interface with streaming, token-by-token responses.
- Added multi-thread conversation history and Markdown and code-block rendering.
- Kept API keys server-side through a Node/Python backend.

StreamFlix (Netflix-inspired streaming app)

React, Vite, JavaScript, REST API, Tailwind CSS

- Built a responsive media discovery dashboard with touch and keyboard-friendly carousels.
- Fetched data dynamically from a media API, with loading and error states.
- Added search and genre browsing, and lazy-loaded media for faster first paint.

EDUCATION

B.Sc. in Electrical and Computer Engineering – Addis Ababa University, Ethiopia *2021 – 2025*

Web Development Bootcamp – Evangadi Networks *March -Sep 2026*

- Intensive full-stack training in JavaScript, React, Node.js and relational databases.

ENGINEERING STRENGTHS

- **Systems thinking:** designs clean data flow between UI, API and database, drawing on an ECE foundation.
- **Analytical debugging:** breaks problems into small, testable pieces and finds root causes methodically.
- **Performance mindset:** measures before optimizing and understands what happens below the framework.
- **Fast learner:** moved from hardware-oriented engineering to modern full-stack and AI development.
